STAGE, A JOURNEY OF SOCIAL INCLUSION

2nd Newsletter

Welcome to STAGE, the Erasmus+ project that uses digital tools to help migrants settling into a new country!

STAGE means **"SupporTING MigrAnt integration and combating racism at local level through digital servicEs"**.

We are glad to present the result of our research "**Identification of local and national social inclusion needs**."

The aim of this project result is to collect data in order to create the content of the Web App and provide materials for the training course that will be released. The Web App will offer a platform to familiarise users with the host country's language, as it will contain basic language learning and translation services and will help to build networks in the local communities.

PROJECT RESULT 1

Report on migrants' social inclusion needs

During the previous months, the consortium of STAGE collected data about migrant integration in the Partners' Countries in order to better understand their needs. To reach this objective, it was decided to use two sets of **questionnaires**, one targeted toward migrants and another toward professionals and experts working with migrants. The questionnaire for migrants was composed of two parts: one was designed to learn about their needs and a second was to learn more about their migration stories. Partners also carried out **desk research** to gather more information and literature on the situation of migrants in each partner country. This desk research compiled data and numbers related to migrations and the relevant situation of the host country.

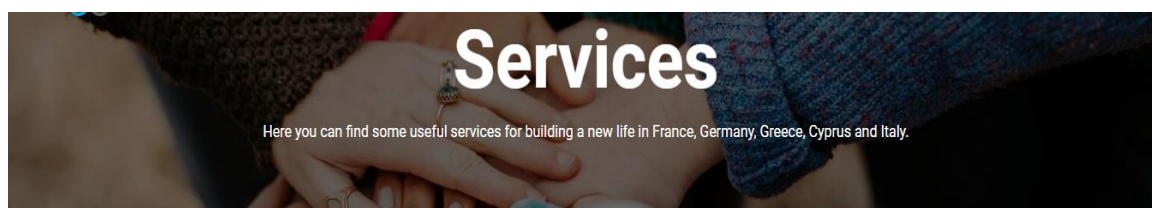

All the data collected through the questionnaires and the data acquired by each partner during the desk research were then put together into a country report prepared by each partner.

At the end, all partners wrote a **STAGE project Comprehensive Report** about the Needs of the Migrants in **Italy, Germany, France, Cyprus, and Greece.**

You can read a summary of the report [here](#)!

Our commitments for the next months

Based on the Country reports findings, **HT Apps will develop a modern and innovative Web App** that will enhance the digital and social skills of migrants. The App will support migrants, newcomers or not in the local communities, upon their arrival in the host country, but also in their everyday life. It will **include a mentoring area**, where migrants can connect with mentors, **a service information area**, where they can find useful links, and an **interactive Map** aiming to share stories and routes of migrants.

The Web App will be released in March 2023!

The STAGE consortium consists of five organisations in **France**, **Cyprus**, **Greece**, **Germany** and **Italy**, that share a common vision for better migrant integration through the project, and agreed to work together towards its implementation.

Are you interested in collaborating with us?

Do you work for an association dealing with migrant integration? Are you a language teacher working with adult migrants? Or are you a supporter of migrants' social inclusion?
