

SCIREARLY

SCIREARLY

Reducing early school leaving and
underachievement

SCIREARLY is aiming to find out how to keep children at school who may be at risk of leaving early. We want schools to give children the best possible opportunity to succeed in their learning and to thrive and grow in terms of their cognitive development and psychosocial wellbeing.

We expect a wide range of impacts from the project. This includes the changes that schools will be able to make based on the findings of the project, as well as policy developments at local and national level reducing the number of students leaving school early. We aim to report the findings in various formats so that teachers, families, researchers, policymakers can access information relevant to their needs to help them make transformative changes to the lives of children in school.
